

Description

EcoFlame KSB60 is what you need to equip a classic Turkish or Roman bath, hammam! The equipment works flawlessly in steam generator mode, creating the necessary microclimate in the room. This model has 6 kW of power and is designed for small steam rooms from 5 to 8 cubic meters. It differs from other models by the presence of a forced steam supply button. The steam generator for the hammam has compact dimensions, is easy to mount and is practically invisible. It works from the mains, has a fairly reliable case, thanks to which the equipment works smoothly in conditions of high humidity.

If you decide to buy a steam generator for a hammam presented on this page, you will receive nozzles, an automatic cleaning valve, buttons in the set forced supply of steam, as well as a remote control panel, thanks to which you can set precise settings for the operation of the equipment. Also, each buyer receives a 2-year manufacturer's warranty. A steam generator for a home hammam will serve you without fail for 10 years. You can buy modern equipment for a bath with delivery on our website, where other products for equipping a steam room await you.
